Dear Digital Garage Team

I am writing to you today to accompany my resume in my application for the position of senior data engineer advertised through [seek.co.nz](#). Below is a more in-depth description on how my experience through my career meets the expectations of the role.

For the last five years I have worked daily with Python & SQL in the cloud (AWS & Azure), which gives me great standing to meet the technical expectations of the role. Throughout my career I have working extensively with a wide range of technologies that are essential to the software and data space.

This has come from my experience in a deliberate variety of industries that are supported in by software and data engineering. This encompasses many business sizes and team structures and approaches to how organisations use and utilize their data. I take from this the ability to join and contribute quickly to the teams effectiveness, as well as adapting my knowledge to the teams needs as well as imparting skills and lessons through a broad base of industry knowledge.

I hope the above provides a greater insight into my skills and I look forward to hearing further from the Digital Garage team soon

Regards
