Dear Sourced Team

I am writing to you today to accompany my resume in my application for the position of senior data engineer advertised through seek.co.nz. Below is a more in-depth description on how my experience through my career meets the expectations of the role.

The job description states that candidates require collaboration across operations and development teams, as well as technical leadership ability. These are skills I have crafted leading many projects, across many departments, whilst implementing the data and digital processes at Heineken NZ. My roles since have allowed me to further hone these skills as constant collaboration with vast quantities of stakeholders from all backgrounds, was key to my success. Most recently this was seen during my time at Spend Network where we were creating and maintaining green field projects being released to market.

During these projects I my activities included advising on the requirements of, as well as reviewing and up-skilling the work of my more junior peers. Being accountable for their work in to my up-line and was something that I relished in the role as imparting what wisdom I have gained through my career was very fulfilling.

As a final point I have looked at the required tech stack for role, and in order to help outline where I have had academic and professional experience with the required technologies, I've listed the following:

- **SQL:** *Graduate Diploma (SwE), Heineken, Westpac, Pik Pok, Spend Network*
- **Python:** *Heineken, Westpac, Pikpok, Spend Network*
- **Bash:** *Heineken, Westpac, Pik Pok, Spend Network*
- **PostgresQL:** *Westpac, Pik Pok, Spend Network*
- **DBT:** *Westpac, Spend Network*
- **Jenkins:** *Pik Pok, Spend Network*
- **AWS:** *Westpac, Pik Pok, Spend Network*

I hope the above provides a greater insight into my skills and I look forward to hearing further from the Sourced team soon

Regards

Peter Bowman
